Homework 4

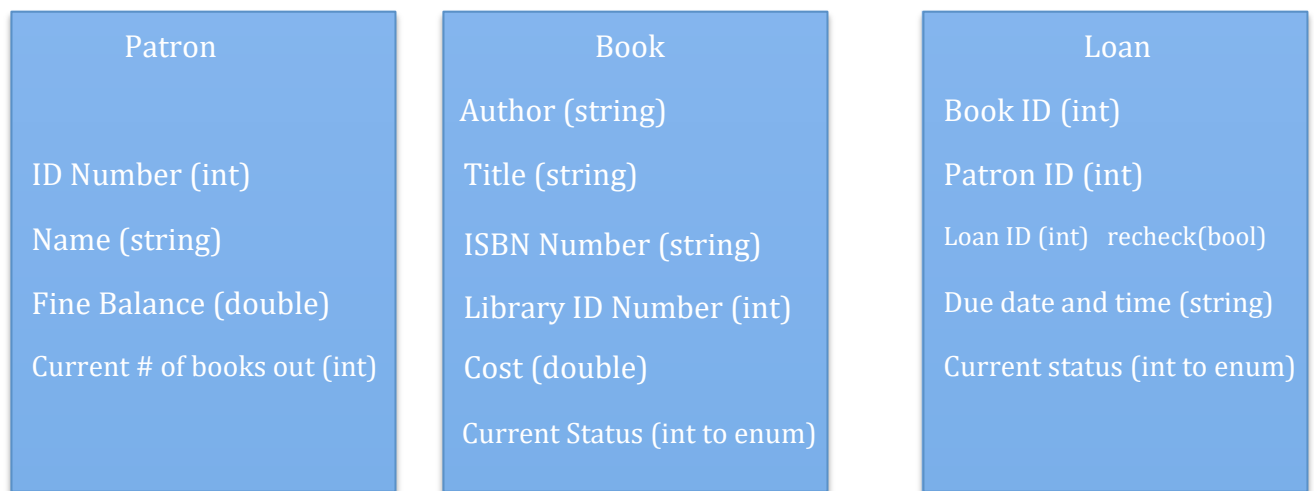

CSCE 1040
Section 001

Manage Loans Design
Program

Class Relationships

Class Contents

Patrons
Print a list of all patrons
Patronlist (vector)
Add Patron
Edit Patron
Delete Patron
Find Patron
Print details for one Patron

Books
Print a list of all books
Booklist (vector)
Add Book
Edit Book
Find/Search Book
Delete Book
Print details for one Book

Loans
Check in/out a book
List all overdue
List all books for patron
Update loan status
Re-check a book
Edit a loan
Report lost

Inheritance relationships:

A Book is a Library Item

An Audio CD is a Library Item

A DVD is a Library Item

Therefore, Book, Audio CD, and DVD are all subclasses of Library Item

Function Pseudo Code

Add Patron

Prompt user for ID

Prompt user for name

Create Patron Object

Populate Patron Object

Add object to collection

Edit Patron

Replace specified Patron object instance variables with new values

Delete Patron

Delete the Patron object in the list using erase() method

Find Patron

Use for loop to iterate through the list

Return the Patron object with matching ID

Print Patrons

Use for loop to iterate through the list

For each iteration, print out all the instance variables of the ith Patron object with Print Specific Patron method

Print Specific Patron

Print all instance variables of the specific Patron

payFines

Add the fine to the Patron's fines based on the days overdue

Add Book

Prompt user for name

Prompt user for title

Prompt user for ISBN number

Prompt for ID

Prompt for cost

Prompt for current status

Convert the int currentStatus value to respective enum value

Create Book object

Populate Book object

Add object to collection

Edit Book

Replace specified Book object instance variables with new values

Delete Book

Delete the Patron object in the list using erase() method

Find Book

Use for loop to iterate through the list

Return the Book object with matching ID

Print Books

Use for loop to iterate through the list

For each iteration, print out all the instance variables of the Book object with Print Specific Book method

Print Specific Book

Print all instance variables of the specific Book

Check out book

Prompt for Book ID

Prompt for Patron ID

Prompt for Loan ID

Use findPatron method to access the Patron object
Check if there are any overdue books or if the patron has 6 books
 If either condition is true, patron cannot check out a book
Use findBook method to access the Book object
Check the book's current status if it is out, repair, or lost
 If either condition is true, patron cannot check out this book
 If lost, use reportLost method

If both checks are passed
 use editBook method to update the book info
 use editPatron method to update the patron info
 Create a Loan object
 Populate Loan object
 Add Loan object to collection

Check in book

Prompt for Book ID
Prompt for Patron ID
Prompt for Loan ID
Use findBook method to access the Book object
Check if the Book is overdue with currentStatus
 If it is overdue, use the payFine method to charge the
 Patron a fine
 Update the book info with editBook
Use findPatron method to access the Patron object
 Update the patron info with editPatron

Delete the Loan object from the list using erase() method

List all Overdue Books

Use a for loop to iterate through the loanlist
For each iteration, check if the Loan object is overdue with
currentStatus
 If overdue, use findPatron method to access the Patron
 object
 Print out the Patron object's info with print Specific Patron
 method
 Print out the book info with print specific book method

List all Books for Patron

Prompt for Patron ID
Use a for loop to iterate through the loanlist
For each iteration, check if the Loan object's Patron ID matches
user input
 If true, print out the book info with print Specific Book
method

Update loan status based on System Clock

If clock passes 10 days since book was loaned change
currentStatus to overdue with edit Loan method

Re-check a book

Use a for loop to iterate through the loanlist
If the book ID matches the book ID of a Loan object
 Check if the recheck variable is already true
 If true, book cannot be rechecked
 If false, change recheck to true and edit the loan
using the edit Loan method
 Terminate loop because book has been found

Edit a Loan

Replace specified Loan object instance variables with new values

Report Lost

Use the find Patron method to access the Patron object
For each iteration, check if the patron ID from the Loan of the
missing book matches the Patron ID of the Patron object
 If true, use the find Book method to access the Book object
 Add the cost of the book to the Patron's fines
 Terminate loop because patron has been found

Find Loan

Use for loop to iterate through the list
Return the Loan object with matching ID

Output file (for loans, books, and patrons)

Iterate through vector, fout the info for each iteration

Input file (for loans, books, and patrons)

Check if file exists already
 If exists, fin the object info and add to vector
